

Afzal Saiyed

Tech Lead Engineer, Fullstack

Fullstack engineer with more than five years of experience, the last three and a half in fintech, building KYC and identity-verification products that banks and insurers run in production. Currently leading two engineers at Perfios, working across the Python and JavaScript ecosystems and the AWS infrastructure behind them.

Skills

Frontend: TypeScript, React, Next.js, Angular, Vue, WebRTC, WebSockets, Redux, Jest, React Testing Library, CSS, HTML, SCSS, Web Workers

Backend: Python, FastAPI, Django, Node.js, Express, MongoDB, MySQL, Redis, Kafka, RabbitMQ, Elasticsearch, System Design

DevOps & Cloud: AWS (ECS, EC2, Lambda, ElastiCache, Secrets Manager, CloudWatch, SQS, NLB), Serverless Framework, HAProxy, Linux, Docker, Docker Compose, Git, NGINX, CI/CD

Professional Work Experience

Perfios Software Solutions *Feb 2023 - Present*

Tech Lead Engineer (Fullstack) — Apr 2026 - Present | Senior Software Engineer (Fullstack) — Feb 2023 - Mar 2026

- Completely rewrote customer-facing VKYC and VideoPD, two Angular codebases with roughly 75% of the same code, into a single Vue 3 project. Build size went from 27 MB to 6.9 MB and load time from 7-8s to 2-3s.
- Integrated OneSDK into VideoPD Agent side using an iframe, with the two communicating through iframe events. Moved the agent journey UI out of VideoPD except the live video element, so new screens/UI changes now ship through OneSDK config instead of a deployment.
- Lead the team building PIVC, VKYC and OneSDK. Two engineers report to me and I mentor juniors on other product teams. I own architecture decisions, daily code reviews and release sign-off.
- Optimized latency across multiple APIs by implementing multithreading, reducing response times by 50%, and enhancing overall system performance.
- Own the HAProxy config across VKYC, PIVC and OneSDK, SSL certificate onboarding and renewal for client domains, TLS termination, per-domain IP allowlisting, and routing to different backends based on URL and headers.
- Cleared every VAPT finding raised by clients ahead of go-live, with nothing recurring on re-test.

Patch Infotech (Client: Kroger) *Aug 2021 - Jan 2023*

Senior Software Engineer

- Built and maintained a CMS powering Kroger's banner ecosystem using TypeScript, React, Redux, JSON Schema, Node.js, Express, and Python.
- Contributed to the redesign and development of key modules, reducing the learning curve for developers by approximately 80%.
- Upgraded existing modules with new features and performance enhancements.
- Provided mentorship to junior developers and conducted daily code reviews.

Freelance Software Developer (Client: UpScriptHealth) *Oct 2019 - Jul 2021*

- Built Python automation scripts, scheduled via crontab, for telehealth workflows - auto-assigning doctors to customers without a prescription, generating CSV reports, and sending SMS via Twilio.
- Improved performance and maintainability by moving database operations out of code into MySQL stored procedures.

Recent Projects

VideoKYC (Fullstack)

- Real-time video verification used by financial institutions across India. Angular, Vue and WebRTC on the frontend Python on the backend.
- Conducted a deep dive into WebRTC implementation across multiple browsers, identifying and resolving video, audio and data channel issues to improve call success rate and communication quality.

PIVC - Pre-Issuance Verification Call (Backend)

- Platform that lets insurers verify the customer, and confirm the applicant understands the policy terms and coverage.
- Developed and delivered an end-to-end insurance verification flow with document OCR, selfie, and video liveness for a Vietnam-based client, with multi-language support including Vietnamese and Hindi.

OneSDK - Offline KYC (Fullstack)

- A fully configurable no-code/low-code solution to create offline KYC journeys for financial institutions, now live with multiple clients. Python and FastAPI at backend, React at frontend. Reduces new client onboarding time by 70%.
- Added support for Speech to Text, passive liveness, KYC Document OCR, Aadhaar XML, Digilocker, CKYC etc.

Awards

Circle of Excellence, Perfios 2025 | Blaze a Trail, Perfios 2024
